HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

8 We thank Dr Wang J-G et al. for their interest in our study¹ and their letter².

11
12 We agree that nucleos(t)ide therapy (NUC) may modify the overall results in our study. The
13 benefit of viral suppression and its time-dependent increasing impact has been nicely shown
14 by Papatheodoridis et al. evidencing a HCC prevalence of 5.2% within the first 5 years of
15 NUC, which declined to 1.4% within the 5-10 years with a yearly incidence of 1.22 and 0.73%,
16 respectively³.

21

22
23 Our results confirms with others 1. the positive impact of viral suppression on the risk of
24 HCC⁴; 2. the absence of a differential effect of Tenofovir or Entecavir on this risk in European
25 or US studies contrarily to what was reported in Asian studies, and this remained true in NUC
26 naïve as well as in NUC treated patients, whatever the underlying liver disease^{3,5}.
27
28

29 Finally, we also agree that HBsAg loss and anti-HBs seroconversion are associated with a
30 higher reduction of HCC⁶. In our study of the Hepather cohort treated by Tenofovir or
31 Entecavir¹, including 1800 HBsAg-positive patients, HBs Ag loss was recorded in only 51
32 patients (2.8%) and 13 of the 51 (25.4%) developed anti-HBs sero-conversion without
33 significant difference between both analogues ($p = 0.15$ and $p = 0.94$, respectively). Two of
34 these 13 sero-converters developed HCC before HBsAg loss. We do not expect that HBsAg
35 sero-clearance could explain the similar efficacy between Tenofovir and Entecavir.
